

# Release note: datacheck 1.0.4

*Reinhard Simon*

*Thursday, September 23, 2014*

## Summary

The package provides functionality to check variables against a set of basic rules. A rule file can be accompanied by look-up tables. In addition, the package provides some convenience testing functions that may serve also as an example for defining ‘data rules’ or tests.

See examples online at <http://cran.r-project.org/web/packages/datacheck/vignettes/index.html>.

This version is primarily a maintenance release to be compatible with the latest base software (R 3.3.1).

## Requirements

- R version 2.15.1 (recommended: latest R version)

## Removed features

- the automated tests were removed from the build

## Download & source code

<http://cran.r-project.org/web/packages/datacheck/index.html>
